

# puddlejumper

## File Transfers Made Easy

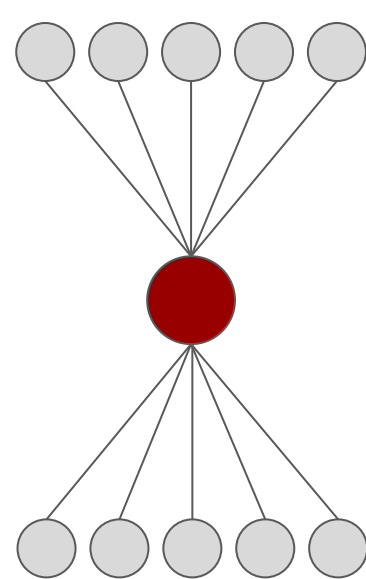

Puddle Jumper is a point to point file transfer web application designed to securely transport sensitive financial documents between servers that are owned by different companies and managed by diverse financial teams.

### The Problem

#### Current System:

- Ad hoc file transfer scripts
- Decentralized
- Non scalable
- Impossible to manage
- Error prone

#### Puddle Jumper

- Centralized file transfer server
- Fewer connections to manage

### Scalable

- Central repository for all file transfer information
- Large numbers of file transfers are easier to manage and can be configured from one place

### Developer Friendly

- REST API: allows for Puddle Jumper transfers to be easily integrated into any developer environment
- Custom scripts can be attached to transfers in order to add extra flexibility to the base file transfer process

### Easy to Use

- Web dashboard with graphical information
- Accessible settings and configurations for non technical users
